Introduction

This website acts as an event planner for events in the Hoboken area. Stevens has many events for students that are easy to find (with Ducklink, for example), but when it comes to events open to the public in Hoboken, it is harder to search for them. Our application would fix this problem, allowing Hoboken residents to search for and RSVP to events that they want to attend outside of the Stevens campus.

Therefore, our project would focus on creating a database of events, as well as users, to connect people to things they want to do.

Core Features

- **Landing Page**
 - Explains the purpose and functionality of the site
- **Add Event Page**
 - Allows users to create events for others to join
- **All events page**
 - Shows all events in the area
 - Allows users to join events
 - Shows filters for specific tags
- **Event page**
 - Shows information about the specific events (creator, registration count, location, description)
 - Events can have tags that allow users to filter by types of events they are looking for
- **My registered events page**
 - List of upcoming events the user has registered for
- **User profile page**
 - Created when a user creates an account
 - Shows your name and personal information
 - Shows events that user has attended in the past and hosted

Extra Features

- Event recommendation feed based on previous events attended/liked
- Users can create groups to plan to attend an event with/invite other people
- Ability to follow users and show their activity feed
- Map of nearby events
- User calendar displaying events already registered for
